# TURNAMIC®

# GET CONNECTED

**A year has already passed since Rossignol launched the new TURNAMIC® binding concept on the market. Spurred on by the tremendous success achieved in the international marketplace, Rossignol is adding new versions to its expansive range of bindings. Note that all the racers in the Rossignol team have already adopted TURNAMIC® bindings for both their competitions and training sessions, whether for cross-country skiing, biathlons, conventional skiing or skating.**

**TURNAMIC®,**
**an innovative concept that maximises the potential of the ski-boot-binding trio.**

### EASY

TURNAMIC® has been designed to allow extremely easy operation for all stakeholders in the market. For skiers, it allows very intuitive foot entry/exit and adjustments with few constraints. For retailers, it paves the way for extremely fast, tool-free mounting and removal across the entire range.

### TUNABLE

The other major asset of TURNAMIC® is its ability to adapt to different snow conditions as well as the skier's level of proficiency. This easy-to-use concept allows the skier to very quickly and easily adjust the position of the binding on the ski according to the required level of glide and grip.

### DYNAMIC

TURNAMIC® respects the ski's construction, thanks to its non-intrusive IFP plate. It has a completely neutral impact on the ski's natural behaviour, allowing it to express its full potential in the form of complete and no-loss energy transfer. The TURNAMIC® concept liberates the ski's camber, allowing racers and skiers alike to transfer power more effectively.

# TURNAMIC®, A GROUNDBREAKING GLOBAL CONCEPT

**TURNAMIC® is an innovation for maximising the potential of the ski-boot-binding trio. With this aim in mind, Rossignol has developed its own soles that are a match made in heaven with this new technology and perfectly suited to each type of discipline.**

## INTERFACES

Thanks to this innovative interface, the process for mounting and adjusting bindings is extremely quick, easy and intuitive. Its design features two individual parts, meaning that for the first time ever bindings can be mounted without any effect on the skis and their characteristics.

## BINDINGS

Rossignol and Fischer have worked together in masterminding a new range of bindings in a market that until now has been monopolised by NNN® and SNS®. These new bindings have been engineered with seamless continuity in mind, since they are wholly compatible with the widely dominant standard in the market. The Turnamic® binding simply takes the entire system to another level with its innovative, high-performance design.

## BOOTS

As part of its determination to maximise the potential of the ski-boot-binding trio, Rossignol has developed its own soles that are a match made in heaven with the new Turnamic® concept and perfectly suited to each type of discipline.

## SKIS

The non-intrusive Turnamic® concept maintains the ski's integrity and characteristics, and finally gives the ski every chance to express its full potential in terms of both glide and kick.

# TURNAMIC® PLATE

**This two-part integrated plate allows the ski to maintain its performance without any repercussions on its rigidity or camber. The binding anchor point on the front section combined with the slim-line flexible plate delivers superior support, improves snow feel and produces heightened skiing sensations.**

## *IFP - INTEGRATED BINDING PLATE*

### *COMPATIBILITY*

IFP plates are only compatible with TURNAMIC® bindings. Even though screw bindings can be used, we would advise against it.

### *BENEFITS OF THE IFP PLATE*

• **A two-part plate:** No adverse effects on the ski since its intrinsic characteristics are left completely unchanged (camber, flexibility, resistance, etc.), meaning that the ski is free to express its full performance potential.

**BONDED**

• **No screws:**

> No systematic destruction of the ski's structure caused by screwing.
> Stronger interface and elimination of the wear caused by water ingress around the screws.

• **Fast installation:** Extremely quick and easy mounting and removal.

• **Universal:** The IFP plate is the same for all ranges.

# TURNAMIC® BINDING

**The TURNAMIC® bindings are aimed at offering a truly easy-to-use design while raising the performance bar on all Rossignol Nordic skiing ranges.**

*TURNAMIC® / NNN® / PROLINK SOLES & BINDINGS*

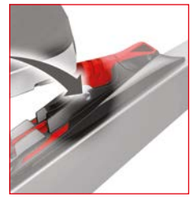
*SNS® SOLES & BINDINGS*

### *TURN LOCK*

The ergonomic design of the lever with secure-grip soft components enables intuitive handling when stepping in and out of the binding.
Haptic and acoustic response when opening and closing. Protected against unwanted opening.

### *STEP IN*

The step-in latches the boot in the binding without having to touch the lever. The closing click ensures that the binding is properly closed.



### *HEEL PRE-ADJUST*

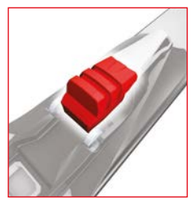
Adjustable heel section where the boot size is preselected using snap hooks on the heel rails. The heel is automatically positioned with it when the position is adjusted so no separate adjustments are necessary later.

### *LOW PROFILE*

The minimalistic design height ensures a low stand position and maximum stability as a result. This means a more stable gliding phase and a direct snow feeling at the same time.

### *FLEXOR SKATE*

With flex grade 11.0 and progressive power flow. Pre-load technology ensures the best ski control from the beginning of the motion. 40° working angle (amplitude), tool-free changeover, secure fit inside binding housing and low-wear material are what make this high-performance absorber stand out.

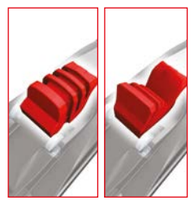


### *TORSION PROOF BODY*

The geometric design of the binding body delivers excellent torsional rigidity for direct and effective power transfer.

### *FLEXOR CLASSIC*

With flex grade 5.0 and slightly progressive power flow. Pre-load technology ensures the best ski control from the beginning of the motion. 45° working angle (amplitude), tool-free changeover, secure fit inside binding housing and low-wear material are what make this high-performance absorber stand out.



### *DOUBLE LOCK SLIDER/CLIP LOCK*

Double locking clip for easy and safe fixation and adjustment of the binding on the IFP (Integrated Fixation Plate).
The step-in mechanism makes it extremely easy to step into the binding. You can hear the "click" when the binding is closed properly.

### *FLOWFLEX*

The two part-plate and click-in setting with two closely arranged pins not only doubles the safety but also guarantees that the binding is fixed on one point. The rest of the binding housing has a floating bearing design along the entire length which has no negative effect on ski performance.

**Prolink® and SNS** ® are registered trademarks of SALOMON

**NNN®** is a registered trademark of ROTTEFELLA AS NORWAY

# BINDINGS

*"The bindings are so easy to mount and remove that you do not need any tools. They are so intuitive to adjust and use that skiers can finetune all their equipment directly on the piste to suit the conditions and the sensations that they are looking for. What these bindings promise in terms of stability and precision for all ranges is truly incredible, whether classic or skating."*

Sylvain Fanjas-Claret,
Martin Fourcade Technician (Double Olympic Champion)

# BOOTS

# TURNAMIC® SOLES

*"To unleash the full potential of the TURNAMIC® concept, Rossignol has developed its own boot-sole system. The soles are suited to every range, and their unique construction takes the general ergonomics of the interface to a whole new level of technical performance."*

Luigi SIMONETTI, Boot Development Manager at Rossignol

## THE ROSSIGNOL RANGE OF BOOTS IS NOW PAIRED WITH FIVE NEW SOLES

CARBON EXPERT SKATE

EXPERT SKATE

EXPERT CLASSIC

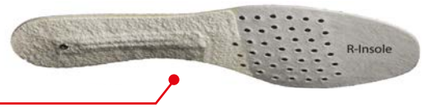
SPORT

TOURING

## MAIN TECHNOLOGIES

Rossignol previously had to develop its boots to fit an imposed type of sole. Now that Rossignol designs and produces its own soles at its plant in Montebelluna, compromises are a thing of the past. These soles are fully engineered to match the shape of our boots and our technologies, culminating in a consistent and effective combination. This also means that the different technologies can be used across the ranges, with entry-level products now based directly on high-end models.

## ROSSIGNOL SOLE COMPOSITION



MID-SOLE

CENTRAL INSERT

CHASSIS

## THE CHASSIS

### 3 POSITIONS SENSOR

The sole is built around three fundamental support points: the front of the first and fifth metatarsal bones and the heel to maximise the performance and comfort of the boot.

### LOW PROFILE

The sole boasts a slim-line design, so that the skier's foot is as close to the snow as possible, thereby delivering lightness, feeling and superior control.

### AXIS PROTECTOR

Our competitors mould the binding axis directly into the sole. Rossignol has adopted a different approach by integrating the axis into an independent and extremely hard-wearing plastic part, which is then incorporated into the chassis to avoid stiffening the front of the boot while retaining all the flexibility and roll of the foot during classic cross-country skiing. This technology is available in all ranges and gives classic boots a similar feel to running shoes with greater sensations when propelling.

### GRIP TECH

Crampons with a unique design and composition for comfortable and safe walking.

## THE CENTRAL INSERT

Rossignol has designed various inserts to give each sole a specific set of attributes tailored to each technique (skating/classic) and level of use (race/sport/touring). By manipulating their materials and their density and altering the shape of the central insert, each sole excels in behaving exactly how skiers need them.

### FOR SKATING MODELS

A "Carbon Aspect" central insert increases the sole's torsional rigidity. Its specific Skating shape improves efficiency during propulsion and increases stability when striding.

### FOR CLASSIC MODELS

A soft plastic central insert allows for natural foot roll during propulsion and a double guide groove across the entire length of the sole offers better control for groomed trails.

### FOR SPORT PERFORMANCE MODELS

A bi-technical insert brings the best compromise to boots designed for our sports customers.

### FOR TOURING MODELS

An extremely soft and flexible central insert produces a comfortable boot with excellent torsional rigidity for even greater stability.

## THE MID SOLE

### MID SOLE

The mid sole acts as an interface between the external sole and the boot. It determines the required flexibility and rigidity. Their importance is such that Rossignol is focusing its development efforts on the comfort and ergonomics that mid soles can procure.

# RACE EXPERT X-IUM

TURNAMIC®

*"For the second year running, Rossignol is equipping its range of boots with exclusive soles that have been developed and manufactured in-house. The result is convincing, with superior behaviour from the boot in terms of both performance and comfort."*

# SKIS

SKIS

Simon Schempp

# RACE

The pursuit for medals, podium finishes and victory has been, is and will always be the guiding light for Rossignol when developing its Nordic skiing products. Competition is woven into the brand's DNA, which is apparent in the unique relationship that fosters trust and promotes constant dialogue with our champions in our joint quest for victory. With the Olympic Games just around the corner, we are determined to give our racers the edge with the latest groundbreaking technologies.

We have worked together in developing a new racing range of premium skis, boots and poles. These new products will undoubtedly be a game-changer during the next Olympics.

### *TURNAMIC®*

The concept gives competitors an even greater chance of victory with the possibility of fine-tuning and tweaking their set-up directly on the snow to reflect current conditions.

### *EDGE ENERGY SENSOR*

This technology stiffens the waist of the ski by raising flexibility at the tip and tail and increases the sliding surface to give the Premium range greater acceleration and the ability to create and maintain speed more effectively.

### *AVAILABILITY*

The RACE technologies are available for all ranges to take all our products to an even higher level, from the most advanced to the most affordable.

***EDGE ENERGY SENSOR:*** A stiffer waist to increase acceleration.

***3D CARBON PROFILE:*** A more consistent ski structure for superior control.

***SUPRA EDGE:*** Reinforced edges for greater stability.

***ACTIV'CAP:*** Combination of two materials (RossiCap + multidirectional fibreglass).

***LOWER TIP:*** Softer and lighter tips and tails for a more balanced ski.

***BI-EDGE:*** Edges combined with two different materials to maintain the ski's camber while increasing its rigidity for greater stability.

***NOMEX:*** Construction of a honeycomb core for extreme lightness.

***AIR TIP:*** The AIR TIP base lightens the ski and improves acceleration whether using the double push or alternative technique.

# R-SKIN

In a move to address changing practices, Rossignol took the decision in 2014 to enhance its collections by developing a new range to promote greater accessibility. The R-SKIN skis were thus born. The initial aim was to eliminate the constraints associated with traditional waxing by replacing it with small skins inspired by touring skis, manufactured by market leader Pomoca. The goal was to allow skiers to leave home wearing their skis and tackle the pistes in classic cross-country skiing without affecting the sliding sensation.

This range is currently being extended and now offers a complete adult range, from PREMIUM to Touring models. Younger skiers have not been left out with no fewer than three different models to satisfy all their needs. Thanks to the wide range of accessories available and the incorporation of the TURNAMIC® concept, skiers can customise the "ski-boot-binding" trio even more, increase the adaptability to different snow conditions and the skier's level of proficiency, and reinforce Rossignol's dominant position in this market segment.

### *EASE OF USE (WAX FREE)*

The time when skis had to be waxed for Classic skiing has come and gone. R-SKIN skis guarantee enjoyable hassle-free skiing.

### *HIGH-TECH*

The R-SKIN range benefits from the technologies used directly by the RACE EXPERT skis.

### *EVOLUTIVE SKIS*

Different ski models for an ideal match with the skier's level and expectations.

### *CUSTOMISABLE SKIS*

Several models of synthetic skins in various thicknesses and different materials to vary the level of grip and allow skiers to fine-tune their skis to suit the snow conditions, their proficiency and their fitness level. This level of adaptability has been increased even further with the TURNAMIC® concept and its seven binding adjustment settings.

> Adjustment towards the front = More control and grip.
> Adjustment towards the rear = More slide and accessibility.

RACE EXPERT

# X-IUM

TURNAMIC®

*"Fitted with the IFP interface and PRO RACE binding, the models in the RACE EXPERT family can express their full potential without any constraints affecting their behaviour or intrinsic characteristics. It is a real asset for all athletes dreaming of victory, whether our champions on the world circuit or young up-and-coming racers."*

Dominique LOCATELLI,
Boot Development Manager
at Rossignol

# POLES

Rossignol is also developing innovative poles for its new ultra-high performance AIR FORCE lines as well as a basket kit for fine-tuning the pole to suit all types of snow conditions. Rossignol has developed a very comprehensive range of poles, ideally coordinated with the different ranges of skis to provide the perfect solution for all Nordic skiing styles. From shafts to grips, baskets and straps, nothing has been left to chance. Every detail has been studied with painstaking care to ensure the same high level of satisfaction, pleasure and performance for all users, from World Cup racer to complete beginner.

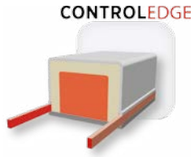
## EXTERNAL CONSTRUCTION

### 3D PROFILE
- More homogeneous structure
- Optimal ski control on the snow.



### CONTROL EDGE
- Torsional rigidity
- Extra stability and ease
- More efficient kick.

### ACTIVE CAP
This construction radically changes the way the ski behaves by combining the characteristics of 2 materials:

**Rossicap**
- Very flexible - influences the flexibility of the whole ski
- More freedom of movement at tip and tail
- Tip and tail float and glide freely over uneven terrain. It's "the snake effect".

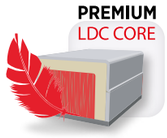
**Multi-directional fiberglass**
- Torsional rigidity
- Enhanced directional stability.

### TOTAL CLASSIC EDGE
The reinforced ABS sidewalls along the full length of the camber improve its performance and deliver an enhanced classic skiing experience as well as superior grip.

### TOTAL SKATING EDGE
The ABS sidewalls are reinforced in three parts with the central section for effectively supporting the camber to ensure the best possible skating experience on all types of snow. The softer two end sections allow for easier skating and greater consistency and control when regulating the camber.

## INTERNAL CONSTRUCTION

### HONEYCOMB STRUCTURE
- Very light material with excellent compression characteristics and strength
- Used on all Expert skis and some Performance skis.

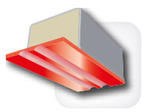


### LDC PREMIUM CORE
A lighter construction, reinforced with basalt fiber.

### WOOD AIR
Wood construction with air channels.

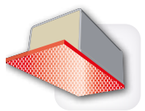
### LDC CORE
Lighter structure.

## SOLE



### SKATING DOUBLE GUIDE GROOVE
Stabilizes the ski and facilitates tracking whatever its position.

### R-SKIN WAXLESS PATTERN
The synthetic waxless pattern behaves almost identically to a waxed ski, boasting easy grip on all types of snow and excellent glide performance whatever the conditions.

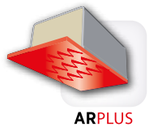


### NUMERIC FINISH
This base preparation technology offers a limitless range of ready-to-ski finishes that will improve glide.
World Cup base finishes for everyone!

### AR POSITRACK WAXLESS PATTERN
Thermoformed waxless pattern delivering very pleasant glide and excellent grip.

### R-GRIP WAXLESS PATTERN
Progressive waxless pattern that performs at its best at 0°C.

### STONEFINISH
Milled base finish.



### AR PLUS WAXLESS PATTERN
Cut into the base itself, this AR waxless pattern is the perfect compromise between retention and gliding. Perfect for rental use.

## SIZE

### COBRA RACING
For extremely stable, fluid skating. Enables the skier to come back into the direction of travel faster at the end of the glide phase.

### SHORT SKI CONCEPT
An exclusive Rossignol concept that guarantees maneuverability. Facilitates acceleration and makes skating movements more dynamic.

### MEDIUM SIDECUT
This versatile sidecut enables you to ski both on and off track.

### PARALLEL SIDECUT
A parallel sidecut is especially well suited to track skiing.

### WIDE SIDECUT
A sidecut that's at ease in all conditions, on all terrain.

## BOOTS CONSTRUCTION

### SOFT TOUCH
Ultra-comfortable control thanks to the interface membrane.
- Comfort
- Control
- Fit.

### MOBILE CUFF
Optimal freedom of fore/aft movement combined with torsional rigidity for total control.

### THERMO ADJUSTABLE FIT
Thermoformable materials are heated so that boot volume can be changed. The boot adapts itself to the foot. Tailor-made!
- Comfort
- Precision
- Feel.

### ASYMMETRIC BACK STIFFENER
Stiffener to suit every situation.
- Arch support
- Torsional rigidity
- Well-supported, stable platform.

### LOW VOLUME FIT (LVF)
A unisex alternative for more slender feet (Low Volume Fit).
Personal attention!
- Easy foot entry and close fit
- 100% feel
- Total envelopment of the foot.

### DUAL DENSITY
Injection-molding using different densities of material in the same mold.
- Precision of movement
- Prevents energy wastage
- Optimal contact.

### CARBON CUFF
- 100% carbon cuff
- Optimal power transfer.

### WOMEN LINING
- Soft liner
- Fleece for warmth and protection
- Ultimate comfort.

## ADJUSTMENT

### DOUBLE LACING STSTEM
A single system provides independent control of mid and forefoot closure for more comfort and precision.

### ADJUSTABLE STRAP
For more support and control.

### SPEEDLACE LOCK
Rapid, easy closure for better support of the foot and more precision.

RACE EXPERT

# MARTIN FOURCADE

TURNAMIC®

MARTIN FOURCADE and ROSSIGNOL have worked together in developing a prestigious Nordic collection for all those in search of exclusive products featuring the highest quality.
The Martin Fourcade collection combines the prestige of the Rossignol brand with the reputation of the world's best biathlete, and epitomises the values that they both champion: performance, commitment, victory, aesthetics and sobriety.
This limited edition incorporates the latest technological innovations. The ski will have a "World Cup" finish as standard, while the accessories will include the innovative technical details required by Martin.
